nlagravinese@gmail.com • 475-529-8256 • Available: January 1, 2027

[Portfolio: niclagr.github.io](https://niclagr.github.io) • [Behance](#) • [GitHub](#)

## EDUCATION

**Northeastern University (Dean's List)** • BS Computer Science & Design, Minor in History • Boston, MA • Expected Dec 2026 • GPA: 3.6

## EXPERIENCE

**GE Aerospace — Frontend Developer & UX Design Co-op** • Boston, MA • Jan 2026–Aug 2026

- Led end-to-end UX and frontend development for a real-time 3D geospatial weather visualization platform (Vue 3, CesiumJS). Designed and built a custom 69-token design system and 11+ purpose-built components from scratch. Ran iterative stakeholder demos and user feedback sessions with domain scientists and aviation partners; implemented a "demo mode" experience for executive presentations.
- Designed and implemented UX for complex interactive features: custom layer controls (color ramp, opacity, thresholds), GPU-accelerated wind-particle animations, flight-path and contrail-risk collision detection with time-synchronized playback. Authored 259 of 369 frontend commits (~70%) across 26+ merged PRs.
- Also shipped SIGNPOST, a micro-frontend SaaS scenario-comparison tool: delivered 10 features end-to-end (Figma design → Vue 3 implementation → test coverage), designed and built 50% of reusable components and 100% of icon assets, led a repo-wide domain refactor (40+ files) with zero regressions.

**Tulip Interfaces — Platform Support Engineer** • Remote, Part-time • Jul 2025–Jan 2026

- Provided technical support across 10+ product areas (~15–20 tickets weekly), cutting resolution time ~40%. Identified recurring UX friction in Tulip's data/table model across 30+ Community threads; authored a camera-widget product-feedback proposal and refined a hardware recommendation the customer validated and adopted fleet-wide.

**Tulip Interfaces — Experience Center Hardware/Software Engineer Co-op** • Somerville, MA • Jan 2025–Jun 2025

- Led UX design and prototyping for Mission Control 3.0 (React web app for executive factory tours). Conducted UX analysis for Tulip Experience Center redesign; secured CEO approval through iterative design refinement and usability feedback.
- Built and supported 15+ interactive TEC demos for executive tours and trade shows (IMTS, Pharma MES USA, Automate) for 1,000+ professionals; delivered exclusive UX support for World Economic Forum factory demos and CEO/CTO tours.

## TECHNICAL SKILLS

**Frontend & UX:** Vue 3, React 19, JavaScript/TypeScript, Tailwind CSS, Framer Motion, Vite, HTML/CSS, UI/UX design, prototyping, wireframing, usability testing

**Design Tools:** Figma, Illustrator, Photoshop, InDesign

**Other:** Python, Node.js/Express, SQL, REST APIs, Docker, Git/GitHub, Three.js, CesiumJS, Responsive design, Accessibility (a11y), Agentic AI development

## FEATURED PROJECTS

**Jewelry Store CRM & Repair Tracker** • Next.js, React 19, TypeScript, Tailwind, Prisma • In daily use

- Designed and developed a full-stack iPad-first Kanban repair tracker replacing a jewelry store's paper-based system. Conducted on-site user research and iterative testing; observed staff and owner daily, identified friction points, and refined workflows based on real usage patterns.
- Built and shipped with Next.js, React, TypeScript, Tailwind, and Prisma. Implemented features from user feedback: Kanban board for job state, customer directory with search, multi-step intake flows, role-based access, and optimized touch targets for counter-side use. In daily use.

**New Vegas Web Monitor — Dual-Screen Gaming Companion** • Vue 3, Vite, Capacitor, C++ Plugin (NVSE)

- Built and shipped a second-screen companion app for Fallout: New Vegas (Vue 3, Vite, Capacitor, C++ NVSE plugin) rendering live game state (inventory, map, stats) on a phone or handheld's second display. Adapted an open-source Skyrim equivalent: new game plugin, data models, UI, and custom Pip-Boy visual design (CRT phosphor glow, scanlines). Available as PWA and Android APK.

**Additional Design & Development:** Portfolio website (interactive 3D console UI, Three.js, React, Tailwind) • Nurture Nest (maternal health app, Figma UX design + frontend) • LOCK-IN startup (branding, logo, interactive prototype) • Game development (Unity 3D: Whispers of the Abyss, Hellfire at High Noon; Java: Spelling Bee, Red7) • Graphic design & branding (posters, logos, jewelry business identity)

**INTERESTS & ACTIVITIES** — UX design • Game development • Backpacking • Humanitarian tech
