[Portfolio: niclagr.github.io](#) • [Behance](#) • [GitHub](#)

UX/product designer with frontend engineering depth. Ships end-to-end from research and wireframes through production code, on real-time data platforms, factory-floor executive tools, and consumer apps.

EDUCATION

Northeastern University (Dean's List)

BS Computer Science & Design, Minor in History • GPA: 3.6

Boston, MA

Expected Dec 2026

EXPERIENCE

Frontend Developer & UX Design Co-op

Jan 2026 – Aug 2026

GE Aerospace — Aerospace Carbon Solutions

Boston, MA

- Led end-to-end UX and frontend development for a real-time 3D geospatial weather visualization platform (Vue 3, CesiumJS); adapted the SaaS team's Figma-only design system into a working Vue component library, building and extending 11+ components.
- Facilitated 12 iterative feedback sessions over 3 months with domain scientists and aviation partners; research directly shaped layer color gradients and legends, weather station representations, and a dedicated demo mode for executive presentations.
- Designed and implemented complex interactive features: custom layer controls, GPU-accelerated wind-particle animations, and flight-path/contrail-risk collision detection with time-synchronized playback. Authored 259 of 369 frontend commits (~70%) across 26+ merged PRs.
- Designed and implemented 10 features end-to-end for SIGNPOST, a micro-frontend SaaS tool used by airlines to evaluate emissions-reduction tradeoffs across fleet upgrades, sustainable aviation fuel, and carbon removals (Figma → Vue 3 → test coverage); built 50% of reusable components and 100% of icon assets, led a repo-wide refactor (40+ files) with zero regressions.
- Built Figma mockups for SIGNPOST's user-facing pages and data visualizations aligned to the SaaS team's design system, iterating with the product manager and SaaS lead UX designer. Introduced AI-assisted tools (Figma Make, Claude Code, GitHub Copilot) into the mockup-to-code workflow, cutting revision rounds from 3–4 down to 1–2.

Platform Support Engineer

Jul 2025 – Jan 2026

Tulip Interfaces

Remote, Part-time

- Provided technical support across 10+ product areas (~15–20 tickets weekly), cutting resolution time ~40%. Identified recurring UX friction in Tulip's data/table model across 30+ Community threads; authored a camera-widget product-feedback proposal and refined a hardware recommendation the customer validated and adopted fleet-wide.

Experience Center Hardware/Software Engineer Co-op

Jan 2025 – Jun 2025

Tulip Interfaces

Somerville, MA

- Led UX design and prototyping for Mission Control 3.0 (React web app for executive factory tours); iterated through near-daily CEO feedback loops in the lead-up to each demo, refining until sign-off.
- Built and supported 15+ interactive TEC demos for executive tours and trade shows (IMTS, Pharma MES USA, Automate) for 1,000+ professionals; delivered exclusive UX support for World Economic Forum factory demos and CEO/CTO tours.

TECHNICAL SKILLS

Frontend & UX: Vue 3, React 19, JavaScript/TypeScript, Tailwind CSS, Framer Motion, Vite, HTML/CSS, UI/UX design, prototyping, wireframing, usability testing

Design Tools: Figma, Illustrator, Photoshop, InDesign

Other: Python, Node.js/Express, SQL, REST APIs, Docker, Git/GitHub, Three.js, CesiumJS, Responsive design, Accessibility (a11y), Agentic AI development

FEATURED PROJECTS

Jewelry Store CRM & Repair Tracker

In daily use

Next.js, React 19, TypeScript, Tailwind, Prisma

- Designed and developed a full-stack iPad-first Kanban repair tracker replacing a jewelry store's paper-based system. Conducted on-site user research and iterative testing; implemented Kanban board for job state, customer directory with search, multi-step intake flows, role-based access, and touch-optimized targets for counter-side use. In daily use.

New Vegas Web Monitor: Dual-Screen Gaming Companion

Vue 3, Vite, Capacitor, C++ Plugin (NVSE)

- Built and shipped a second-screen companion app for Fallout: New Vegas (Vue 3, Vite, Capacitor, C++ NVSE plugin) rendering live game state (inventory, map, stats) on a phone or handheld's second display. Adapted an open-source Skyrim equivalent with a custom Pip-Boy visual design (CRT phosphor glow, scanlines). Available as PWA and Android APK.

Additional Design & Development: Portfolio (Three.js, React) • Nurture Nest (maternal health app) • LOCK-IN startup (branding) • Game dev (Unity 3D, Java) • Graphic design & branding

INTERESTS & ACTIVITIES

UX design • Game development • Backpacking • Sustainability • Humanitarian tech
